HISTORY

Requires Changes

2 SPECIFICATIONS REQUIRE CHANGES

You have made a great progress. Great work.

In case you need help feel free to get in touch with your mentors.

Keep learning!

You are awesome 🎉

<https://www.youtube.com/watch?v=i66ccB4ShXU&t=509s>

I want to share these awesome episodes from Udacity about blockchain

<https://www.udacity.com/built-on-blockchain>

I wanted to share this great video about the fundamentals of Ethereum. Is it really important for your next project, so PLEASE WATCH it <https://www.youtube.com/watch?v=yVN3ppNdwMo>

Blockchain ID validation routine

Response should contain message details, request timestamp, and time remaining for validation window.

User obtains a response in JSON format with a message to sign.

Message format = [walletAddress]:[timeStamp]:starRegistry

The request must be configured with a limited validation window of five minutes.

When re-submitting within validation window, validation window should reduce until it expires.

URL: <http://localhost:8000/requestValidation>

Good job ★

Suggestions

⚠ I suggest that you store the validation information in the database to persist the data even if the program is stopped, fails or you use another machine to register the star.

Web API post endpoint validates message signature with JSON response.

Upon validation, the user is granted access to register a single star.

URL: <http://localhost:8000/message-signature/validate>

Well done 👍

I recommend this excellent article that talks about the best practices when developing a RESTFUL API <https://medium.com/@mwaysolutions/10-best-practices-for-better-restful-api-cbe81b06f291>.

Also, this is a "must see" video from Google about how to design better RESTFUL APIs. <https://www.youtube.com/watch?v=4lBMQteMd6Y>

Star registration Endpoint

Star object and properties are stored within the body of the block.

Star properties include the coordinates with encoded story.

Star story supports ASCII text, limited to 250 words (500 bytes), and hex encoded.

URL: <http://localhost:8000/block>

Good progress 🍊

Required

❌ The user should only be able to register one star per validation. If you want to register another star you would need to start again the process each time.

Star Lookup

Response includes entire star block contents along with the addition of star story decoded to ascii.

URL: [http://localhost:8000/stars/hash:\[HASH\]](http://localhost:8000/stars/hash:[HASH])

Great job 🙌

These are some good practices about developing servers with Express that are very helpful <https://github.com/i0natan/nodebestpractices>

<https://github.com/tonatoni/nodebestpractices>

These are some performance tips for your API

<https://developers.google.com/drive/api/v3/performance>

Response includes entire star block contents along with the addition of star story decoded to ascii.

Multiple stars might be registered to a single blockchain identity.

The response should support multiple star blocks.

URL: [http://localhost:8000/stars/address:\[ADDRESS\]](http://localhost:8000/stars/address:[ADDRESS])

Great !!!

These are some good practices for improving performance in Node.js

<https://engineering.linkedin.com/nodejs/blazing-fast-nodejs-10-performance-tips-linkedin-mobile>

These are some error handling tips for your API

<https://nordicapis.com/best-practices-api-error-handling/>

Response includes entire star block contents along with the addition of star story decoded to ascii.

URL: [http://localhost:8000/block/\[HEIGHT\]](http://localhost:8000/block/[HEIGHT])

 The `storyDecoded` is missing from the JSON response. Please add it.
